

Raghav Dharani

Senior Product Manager | AI Automation & B2B Workflow Platforms

New York, NY
929-260-8138
raghav.dr@gmail.com

Professional Summary

Senior Product Manager with 10+ years building enterprise SaaS, workflow automation, AI-enabled operational products, and integration-heavy B2B platforms across retail operations, claims workflows, intelligent automation, and financial-services-adjacent environments. Strongest in product areas where complex business processes need to become clear product strategy, measurable automation opportunities, development-ready requirements, and scalable customer-facing workflows. Hands-on technical product leader who partners with engineering, data science, design, enterprise customers, and business stakeholders to define product direction, scope model-enabled workflows, shape feedback loops, and translate ambiguous operational needs into epics, user stories, acceptance criteria, prototypes, API assumptions, and launch-ready documentation.

Core Strengths

Product & Delivery: Technical Product Management | AI Product Strategy | Roadmap Ownership | PRDs | Epics & User Stories | Customer Discovery | Launch Readiness

AI & Technical: AI-Assisted Product Delivery | Intelligent Automation | ML-Enabled Recommendations | Human-in-the-Loop Workflows | REST APIs | Data & Integration Workflows | Claude | Cursor

Domain & UX: B2B SaaS | Financial Workflow Automation | Claims Workflows | Retail Operations | Workflow Simplification | Exception Management | Enterprise UX

Professional Experience

KWI Senior Product Manager, Enterprise Merchandising Platform 2025 - Present

Lead product discovery, requirements, and prototype validation for a modern Transfers Operations application, translating fragmented legacy workflows into a phased platform for transfer visibility, exception management, lifecycle status, and operational controls.

Introduce AI-assisted, spec-driven product development using Claude and Cursor to create working prototypes, clarify scope earlier, identify edge cases, and reduce avoidable requirement churn before engineering engagement.

Lead modernization of the core merchandising platform, shaping phased roadmaps across purchasing, item maintenance, and store-transfer workflows while balancing customer adoption, legacy constraints, API dependencies, and delivery sequencing.

Partner directly with engineering, design, and business leadership to translate ambiguous operational needs into functional specifications, decision frameworks, acceptance criteria, and implementation-ready stories.

Create structure around legacy workflows by turning transfer, purchasing, and merchandising processes into clearer user experiences, delivery artifacts, and rollout paths for cross-functional execution.

Upshop Senior Product Manager, Store Operations Platform 2022 - 2025

Built a mobile-first B2B store operations platform from concept through launch across 100+ grocery retail locations, designing for enterprise retail buyers while ensuring frontline users could adopt workflow changes in daily operations.

Launched ML-powered ordering and replenishment workflows using demand signals to generate production and stocking recommendations, reducing overproduction by 18% and improving forecast accuracy across distributed

store teams.

Partnered with data science, engineering, UX, implementation, and customer teams to translate forecast outputs into usable recommendations, override paths, feedback loops, manager controls, and operating KPIs.

Designed product workflows that guided frontline teams toward required operating actions, increasing engagement by 40% by replacing fragmented, paper-based store processes with a unified mobile-native experience.

Introduced waste audit and loss prevention workflows from scratch in a compliance-adjacent store operations context, reducing inventory shrink by 12% across retail networks within 6 months of launch.

Designed and launched external REST APIs enabling enterprise clients to connect POS, ERP, and supply-chain systems, expanding the platform's role within broader technology ecosystems.

360insights Lead Product Manager, Channel Incentive and Claims Platform 2019 - 2022

Owned roadmap and execution for an enterprise SaaS platform serving 100+ clients across channel operations, claims workflows, data management, and financially driven multi-stakeholder processes.

Led a ground-up rebuild of the claims platform that doubled processing throughput and cut manual review effort by 50% through workflow architecture improvements, exception routing, validation improvements, and process redesign.

Built data ingestion and API-driven onboarding workflows that reduced enterprise client implementation timelines by 35% and improved customer time-to-value.

Improved client NPS from 6.5 to 8.5 through targeted investments in reporting transparency, workflow visibility, operational performance tooling, and clearer customer-facing feedback loops.

Influenced senior stakeholders on roadmap and system design decisions in a financially driven enterprise environment through structured product narratives, prioritization frameworks, and tradeoff framing.

EdgeVerve Systems Product Manager, AI and Intelligent Automation Platform 2016 - 2019

AI Product And Technical Practice

Led product development for an enterprise intelligent automation platform, defining workflow automation, classification, routing, exception handling, monitoring, and operational governance capabilities for SLA-driven business processes.

Partnered with engineering and data science teams to integrate ML classification, NLP, chatbot, and decision-logic capabilities into automation workflows while keeping product requirements grounded in enterprise customer needs.

Drove a 50% increase in platform adoption by defining routing, exception handling, monitoring, AI classification, and decision logic capabilities for production workflows aligned to enterprise SLAs.

Contributed to Forrester Wave Strong Performer recognition in the 2017 RPA category by shaping product narratives that translated early AI complexity into clear business value for enterprise buyers.

Creates AI-assisted PRDs, user flows, acceptance criteria, edge-case matrices, Jira-ready stories, prototype screens, API assumptions, and stakeholder walkthrough artifacts using Claude, Cursor, and related tools.

Uses prototypes to validate workflow logic, clarify ambiguous requirements, expose exception paths, and align product, engineering, design, data science, and business stakeholders before development.

Defines product-level success signals for AI-enabled workflows, including recommendation acceptance, exception volume, override behavior, operational efficiency, adoption, and customer impact.

Works across REST API design, event-driven workflow patterns, data ingestion workflows, technical requirements, architecture tradeoffs, integration assumptions, and enterprise platform dependencies.

Education

Management Development Institute MBA

R.V. College of Engineering B.E.

Certified Scrum Product Owner, Scrum Alliance CSPO

Level II Certified Pragmatic Marketing

Institution requires manual review Tools And Technical Proficiencies

Jira Aha!
