

Raghav Dharani

Principal Product Manager - AI-Enabled Platforms | Enterprise Workflow and People Systems

New York, NY | 929-260-8138 | raghav.dr@gmail.com | linkedin.com/in/raghavdharani

PROFESSIONAL SUMMARY

Product leader with 10+ years building enterprise SaaS platforms from the ground up - taking products from concept to measurable adoption across AI-enabled workflow systems, operational decision platforms, and B2B2C SaaS in retail and financial services. Experienced in designing systems that change how people work: translating complex, high-stakes operational behavior into structured, scalable product capabilities that drive measurable outcomes for both enterprise buyers and the individuals those buyers serve.

Operates with genuine ownership - carries multi-year product vision, works directly alongside founding and engineering teams, and moves from ambiguous problem to launched product without waiting for full resourcing. Comfortable being external-facing: has shaped product direction through direct enterprise buyer relationships, solution design sessions, and hands-on customer discovery throughout the product lifecycle.

Actively builds working prototypes in Claude and Cursor before engineering is in the room - compressing discovery cycles, sharpening scope decisions, and de-risking delivery. Brings the same discipline to AI-assisted product development that platform builders bring to system design.

CORE STRENGTHS

New Product Development · AI-Enabled Platforms · B2B2C Enterprise SaaS · Behavioral Workflow Systems · Prototype-Led Discovery · Solution Design and Enterprise Discovery · API-First Architecture · Multi-Year Roadmap Ownership · Cross-Functional Leadership · Enterprise Adoption and Scaling

PROFESSIONAL EXPERIENCE

Senior Product Manager - Enterprise Merchandising Platform

2025 - Present

KWI

- Took a Transfers Operations application from problem discovery through launch - drove requirements, workflow design, and prototype validation through phased rollout, achieving 70% client migration from legacy to new workflows within 2 months of launch and reducing transfer error and exception rates by 30%.
- Introduced AI-assisted, spec-driven development using Claude and Cursor - building working prototypes before engineering engagement, reducing requirement clarification cycles by approximately 25% and rework by 20-30%; now an established practice across the product team.
- Leading modernization of the core Merchandising platform, defining a three-phase roadmap across purchasing and store-transfer capabilities - creating a clear path from discovery through release while balancing enterprise customer constraints and delivery realities.
- Partner directly with engineering, design, and business leadership to translate ambiguous operational needs into clear functional specifications, decision frameworks, and implementation-ready stories - operating as the single point of product accountability across a high-complexity, multi-stakeholder environment.

Senior Product Manager - Store Operations Platform

2022 - 2025

Upshop

- Built a mobile-first B2B2C store operations platform from the ground up - greenfield product taken from concept through launch across 100+ grocery retail locations. Navigated the core B2B2C tension: selling to enterprise retail buyers while designing for the frontline workers those buyers serve, and ensuring both groups got measurable value.
- Launched a net-new Grocery Ordering and Replenishment system powered by ML-based demand signals, giving frontline operators data-driven production and stocking recommendations for the first time. Reduced overproduction by 18% and improved forecast accuracy across distributed store teams.

- Drove 40% increase in user engagement by replacing fragmented, paper-based store processes with a unified mobile-native experience - reflecting genuine behavioral adoption of a new way of working, not just feature utilization.
- Introduced waste audit and loss prevention workflows from scratch, reducing inventory shrink by 12% across retail networks within 6 months of launch.
- Designed and launched external-facing REST APIs enabling enterprise clients to connect POS, ERP, and supply-chain systems, expanding the platform's role within broader enterprise technology ecosystems.
- Led solution design sessions and product discovery directly with enterprise customers and store-level end users; used that signal to drive roadmap decisions that exceeded performance targets by 30%+ across deployments.

Lead Product Manager - Channel Incentive and Claims Platform

2019 - 2022

360insights

- Owned roadmap and execution for an enterprise SaaS platform serving 100+ clients across channel operations, claims workflows, and data management in a complex multi-stakeholder environment.
- Led a ground-up rebuild of the claims platform that doubled processing throughput and cut manual review effort by 50%, delivered through improved workflow architecture and process redesign.
- Built new data ingestion and API-driven onboarding workflows that reduced enterprise client implementation timelines by 35%.
- Improved client NPS from 6.5 to 8.5 through targeted investments in reporting transparency, workflow visibility, and operational performance tooling.
- Influenced senior stakeholders on roadmap and system design decisions in a financially driven, compliance-sensitive environment - building executive trust through structured product narratives and clear tradeoff framing.

Product Manager - AI and Intelligent Automation Platform

2016 - 2019

EdgeVerve Systems

- Led product development for an enterprise AI/ML-driven automation platform from ideation through market launch, partnering with engineering and data science to bring a technically complex product to enterprise customers.
- Drove 50% increase in platform adoption by defining routing, exception handling, and monitoring capabilities; embedded AI classification and decision logic into production workflows aligned to enterprise SLAs.
- Contributed to Forrester Wave Strong Performer recognition (2017, RPA category) - built the product narratives that translated early AI complexity into clear business value for enterprise buyers and shaped external positioning.

AI PROTOTYPING AND TECHNICAL PRACTICE

- Builds working product prototypes and workflow specs in Claude and Cursor before engineering involvement - used actively at KWI to validate scope, reduce ambiguity, and accelerate design-to-build handoff. Treats prototyping as a product discipline, not a shortcut.
- Experiments with AI integration into structured decision and behavioral workflows: how AI-driven nudges, personalized recommendations, and orchestration logic can guide users toward better decisions within complex operational systems - directly applicable to AI coaching and people development platforms.

EDUCATION AND CERTIFICATIONS

MBA - Management Development Institute

B.E. - R.V. College of Engineering

CSPO - Certified Scrum Product Owner, Scrum Alliance

Pragmatic Marketing - Level II Certified
